

# Bull Valley Software's New IdentiFile™ Technology Transforms Document Management Software in the K-12 Education World

New IdentiFile™ functionality takes all of the work out of bursting and filing report cards, transcripts, assessment reports, or any mass-produced documents. Metadata can be read from the document or pulled from the school's SIS to file documents without any human intervention.

CRYSTAL LAKE, ILLINOIS (PRWEB) JUNE 21, 2016

**Bull Valley Software**, a leading developer of document management solutions (DMS) in the K-12 education vertical, announced the release of its new IdentiFile™ module – a module that, when paired with its flagship product, **DocumentLOK™**, promises to automate the bursting and filing of mass-produced documents such as report cards, assessment reports, transcripts, and more.

The **IdentiFile™ module** is comprised of two sub-modules. First, the IdentiFile™ Burst-and-File Designer (IdentiFile™ BFD) allows the user to design a template which defines what elements are going to be used as metadata for indexing purposes, where to find this metadata, and how it will be used. Second, the IdentiFile™ Burst-and-File Filer (IdentiFile™ BFF) executes the process, accessing the metadata as defined in the IdentiFile™ BFD module, bursting the documents, assigning the necessary attributes and indexing criteria, and then filing each document into the proper student file within DocumentLOK™ – all without human intervention.

According to Paul Fotis, Vice President of Business Development & VAR Channel Manager for **Bull Valley Software**, "This feature set is going to transform the document management landscape – removing one of school administrators' biggest pain points by completely automating the process." Fotis adds, "Up until now, many schools still kept physical copies of mass-produced documents like transcripts or report cards, even if they had a document management system." He continues, "Think about it. You're an average sized school district with 4,500 students. You print 4,500 report cards four times a year. Do you really want to manually separate, then individually scan, index, and file 18,000 report cards each and every year?" Fotis concludes, "Now, with IdentiFile™, the entire process of generating, bursting, indexing, and filing mass-produced documents like report cards and transcripts can be reduced to just a few mouse clicks. It is amazing."
